

Rosie's World - About Milk

TED-Ed

Learn about the scientific and technological processes involved in processing milk at a dairy factory. Learn what happens to the 19.1 billion litres of milk New Zealand produces each year after it is collected from the farm and before it ends up on the table.

Let's Begin...

Your teacher would like you to think about the scientific and technological processes involved in processing milk at a dairy factory. This video explores what happens to the 19.1 billion litres of milk NZ produces each year after it is collected from the farm and before it ends up on the table. Watch the video and complete the tasks that follow in preparation for further learning.
